DHILEEBAN A

Under the Guidance of

Technical Trainer

Technical Department, KG College of Arts and Science

Academic Year: **2025 – 2026**

APRIL 2026

Semester: **I**

DECLARATION

I hereby declare that the project entitled “Customer Relationship Management(CRM) system for small business"submitted in partial fulfillment of the requirements for the course [**JAVA PROGRAMMING]** is a **record of my original work** carried out under the guidance of **[DHILEEBAN A]**, Technical Trainer, Technical Department, KG College of Arts and Science.

I further declare that this project has not been submitted previously, either in part or in full, for the award of any degree, diploma, or other similar title, at this or any other institution.

I have acknowledged all sources of information used in this project wherever applicable.

Customer Relationship Management (CRM) System using Java

1. Introduction

Customer Relationship Management (CRM) is essential for small businesses to manage customer data, track interactions, and improve relationships.

This project aims to develop a simple CRM system that helps businesses organize customer information efficiently and improve customer satisfaction

.

2. Problem Statement

Small businesses often manage customer data manually using notebooks or spreadsheets, which leads to:

Data loss or duplication

Difficulty in tracking customer interactions

Poor customer service

This system solves these problems by automating customer data management.

3. Objectives of the Project

To store and manage customer details

To track customer interactions

To reduce manual work

To improve data accuracy

To provide quick access to customer information

4.Scope of the System

This system can be used in:

Small shops

Startups

Service-based businesses

Freelancers managing clients

5. System Modules

Module Name

Description

Login Module

User authentication

Customer Management

Add, update, delete customers

Interaction Module

Record customer interactions

Search Module

Search customer details

Report Module

Display all customer records

6. System Architecture / Workflow

Start

↓

Login

↓

Select Option

↓

Manage Customers / View Records

↓

Process Data

↓

Display Output

↓

Exit

7. Classes Design

Customer Class

Attributes:

customerId

name

phone

email

address

Methods:

addCustomer()

displayCustomer()

updateCustomer()

Interaction Class

Attributes:

interactionId

customerId

date

notes

Methods:

addInteraction()

viewInteraction()

CRMSystem Class

Methods:

menu()

searchCustomer()

deleteCustomer()

8.Sample Menu (Console)

===== CRM SYSTEM =====

1. Add Customer

2. View Customers

3. Update Customer

4. Delete Customer

5. Search Customer

6. Exit

9.GUI Design (Optional - Swing)

JFrame (Main window)

JLabel (Field labels)

JTextField (Input fields)

JButton (Actions like Add, Update)

JTable (Display customer data)

10. File Handling

Data will be stored in a file:

customers.txt

Operations:

Save customer data

Read customer data

Update records

11. Exception Handling

Example:

Java

```
try {
    int choice = scanner.nextInt();
} catch (InputMismatchException e) {
    System.out.println("Invalid Input");
}
```

12. Testing the Program

Test Case

Expected Output

Invalid input

Error message

Empty fields

Warning

Duplicate customer ID

Not allowed

13. Java Concepts Used

Classes & Objects

Constructors

Encapsulation

Inheritance

Polymorphism

Exception Handling

File Handling

Java Swing (GUI)

14. Demonstration Steps

Start the program

Login (if implemented)

Add a customer

Update customer details

View customer list

Search customer

Exit

16. Conclusion

This CRM system helps small businesses efficiently manage customer data, reduce manual work, and improve customer relationships. It demonstrates practical implementation of core Java concepts.
